DAHLIADEL 1946 INTRODUCTION

SNOW (Dahliadel 85M), **M FD**, Bloom 3 x 2. Bush 3½ ft. The most artistic Formal white miniature we have ever grown with the petals cupped back like a gardenia. There is, however, especially in the early season, a light lavender edge on each petal which only makes it more beautiful. It is extremely early and needs no pampering as it does best with just ordinary culture and plenty of sunshine. Fine for cutting or florists use. Certified at O.V.D.A. scoring 85M in 1945.

Root, \$5.00 NET; Pot Root, \$3.75 NET; Plant, \$2.50

We hope now that the war is over that our Victory Gardens will gradually become Flower Gardens with more time to enjoy them. May we wish you all a most successful season and predict that the time spent in your garden with your flowers will provide a most needed relief from war time activities.

ORDER EARLY

With stock and help shortages, we suggest ordering early, as stock of a number of the varieties listed in this Catalog will be depleted before the height of the planting season.

Early orders will help us in booking your order and reserving the stock for you and thus schedule it for the proper shipping time. Do not send us an order at the height of our shipping season and expect delivery in 3 to 5 days. The orders booked weeks and months ahead that are scheduled for specific shipping dates will go out first and the last minute orders will follow as soon as we can get them off.

We also suggest that you check your stock in storage early this season. Roots in some sections of the country are not keeping well, due to the unusual growing season, and there will probably be a general shortage of stock.

If your order is placed after mid-season, kindly give a second choice. Owing to the shortage of stock, kindly indicate on your order whether or not you want us to substitute.

ROOTS

Dahlia roots are divisions of field-grown clumps of dahlias. Each root must contain at least one "eye" from which the plant grows. Sturdy stalks or plants and fine exhibition flowers grow from roots, and strong clumps harvested for the following season. As the planted root acts as a food storehouse for the growing plant, the growth of the plant is thus stabilized under adverse growing conditions.

POT ROOTS

Pot roots are small clumps produced by plants grown mostly in 3" pots in the open during the late Summer, and transferred in the Fall to greenhouses where they are grown under controlled conditions, and allowed to ripen naturally by the end of December. Pot roots should not be judged adversely

because of their size, as they will produce bushes and flowers equal to roots, and in many varieties even better clumps on digging. Many experienced growers prefer pot roots.

GREEN PLANTS

Green plants are sprouts or cuttings taken from clumps grown in especially built greenhouses; rooted in sand benches in air-conditioned propagating houses; potted and grown under greenhouse conditions until well established and then moved to cold frames for proper hardening off. When they reach you they are ready for planting.

Many hundreds of thousands have been grown and shipped by us, and our customers have found them highly satisfactory. They are, as you will notice in our lists, considerably cheaper than roots in the higher priced varieties.

Green plants will produce flowers equal to roots or pot roots when well grown for exhibition, but will not produce as large clumps for the following season. When properly grown, however, many varieties will produce nice clumps.

Dahliadel green plants, in our specially designed shipping box, have been successfully sent all over the United States. See "Notice on Green Plant and Rooted Cutting Shipments," page 32.

ROOTED CUTTINGS

Rooted cuttings are sprouts or cuttings grown exactly as described under green plants (see above) up to the point where a good root system has developed. Rooted cuttings are, this year, being produced and handled in a different way. They will be wrapped separately in live sphagnum moss and can be potted or planted out without removing the moss or disturbing the roots established in the moss. We expect this new type of cutting to take the place of plants to a greater extent than at present, especially on long distance shipments.

Rooted cuttings are 1/3 less in price than plants. We will probably be out of rooted cuttings of some of the new varieties as the season advances. However, we are growing some varieties that are not listed, so send in the list of ones in which you are interested and we will gladly advise you.

TRIAL GROUNDS

The Trial Grounds are all doing a magnificent work. Even the unofficial trial grounds are furnishing important data aiding in selection of varieties for particular localities.

Dahlias which have received certificates at the official Trial Grounds at Storrs, Conn.; East Lansing, Mich.; Ohio Valley Dahlia Association at Cincinnati, and West Virginia at Fairmont are marked in our catalog "Certified at Storrs, E. Lansing, O.V.D.A. or W. Va." An "Award of Honor, Ga.," refers to the Dahlia Society of Georgia Trial Grounds. "Certified at Maryland" indicates being certified at Maryland Trial Grounds at College Park, Maryland.

Seedlings may be sent to any of these Trial Grounds where they will be carefully grown, tested and scored. Fee for each variety is \$3.00 and three roots or plants of each variety must be sent. The Georgia Dahlia Society has temporarily discontinued their Trial Grounds.

Write for entry blanks and instructions from the Trial Grounds you may wish to enter. List and addresses of official Trial Grounds will be sent on request.

ORDER EARLY

With stock and help shortages, we suggest ordering early, as stock of a number of the varieties listed in this Catalog will be depleted before the height of the planting season.

Early orders will help us in booking your order and reserving the stock for you and thus schedule it for the proper shipping time. Do not send us an order at the height of our shipping season and expect delivery in 3 to 5 days. The orders booked weeks and months ahead that are scheduled for specific shipping dates will go out first and the last minute orders will follow as soon as we can get them off.

We also suggest that you check your stock in storage early this season. Roots in some sections of the country are not keeping well, due to the unusual growing season, and there will probably be a general shortage of stock.

DAHLIADEL RECOMMENDATIONS

For Exhibition or Your Garden

If you were at Dahlia del and asked me to check a list of the most satisfactory varieties of dahlias for you to grow, you would probably say you wanted varieties that are not temperamental. Then you would ask for those easy to grow, that produce plenty of flowers good for cutting; house decoration, and exhibition—oh yes, you would want some of the big ones too that will be the envy of the neighborhood. Well, here they are.

With this table of recommended varieties you can pick the types and colors you like most. Where there is more than one, the top variety is the newer and likewise the higher priced one. Practically all of the varieties have won prizes at Shows or Trial Grounds, and will do it again if properly grown and exhibited.

These modern hardy mums are selected for their ability to produce quantities of blooms in general garden conditions. The English mums added this year are most interesting and have done wonderfully well for us. Increasing interest in garden mums is due to recent development of new varieties that bloom safely ahead of frost, while a number of varieties stand the first frost that usually gets the Dahlias. This prolongs the blooming season in your garden by several weeks.

HARDY GARDEN CHRYSANTHEMUMS, Cont'd

Culture is simple. Plant them in ordinary garden soil, 8-10 inches apart in rows, 15 inches apart for mass planting, giving them lots of water, and fertilize with a complete fertilizer once or twice during the growing season. For the black aphid, their worst pest, use a pyrethrum nicotine spray, the same as recommended for dahlias. A protection of muslin, burlap, or even paper the first frosty nights will prevent frost settling in open flowers and keep a bright spot in your garden.

ROOTED CUTTINGS are very satisfactory as they stand shipment wonderfully well. They are individually wrapped in sphagnum moss and can be planted direct in your garden with or without removing moss.

BLOOMS of the large varieties will be much larger than indicated if disbudded.

BUSH HEIGHT given is for plants the first year, planted early and pinched out once.

DAHLIA SEED

Sow in flats or frames in early spring in light soil, cover the seed not more than one-fourth inch about the same as you would tomato seed. When first pair of true leaves are well developed transplant into small pots or flats and grow in cool temperature until they can be planted in the garden. Should they get too large pinch back and shift to larger pots giving them room.

DAHLIA SEEDLINGS never come true to their parentage, but do usually show some similar characteristics in form, color or bush growth. You cannot grow seedlings of a named variety and produce the same variety.

COLLARETTE SEED (Dahliadel grown). Saved from our Collarette varieties should produce mostly Collarettes and Singles. **35 Seed, .50; 100 Seed, \$1.00**

MIXED MINIATURE SEED (Dahliadel grown). A mixture of very fine Decorative, Cactus and Peony type Miniature dahlias. **.35 Seed, \$1.00**

ORCHID FLOWERING SEED (Dahliadel grown). Produces Orchid flowering dahlias consistently for us, with some type and considerable color variations. **35 Seed, .50; 100 Seed, \$1.00**

SINGLE SEED (Dahliadel grown). Saved from our finest Single dahlias. If you want a mass of mixed colors in your garden, try planting some of these seed. They should be placed close for this effect. **50 Seed, .50**
